

FAAn AWARDS 2010 - summary

Voters could record up to five votes in each of seven categories (excluding #1 Fan Face)

Five points were awarded for each first-place vote, four for each second-place vote, and so on

Self-votes were discounted, and any lower-ranking votes each promoted by one rank. Votes disqualified for any other reason were treated in the same way

Rankings for #1 Fan Face were determined by summing the nominees' scores in the other seven categories

In the case of jointly-edited fanzines or jointly-authored websites, the points gained by each such fanzine/website were split equally between the editors/authors.

	John Purcell	44	3
21	Bruce Gillespie	40.5	3
22	Steve Jeffery	38	2
23	Sandra Bond	36	3
	Jerry Kaufman	35	2
24	Art Widner	35	1

Explanation of voting rate: this is the ratio of the number of votes cast (not points allocated) to the maximum number that could have been cast, expressed as a percentage. For example, if all those voting in a given category had recorded three votes (out of a possible five) the voting rate would have been 60%.

Explanation of profiling: Robert Lichtman's profile of 9.2.1.0.2 in winning Best Letterhack, for example, means: nine 1st place votes (5 points each) plus two 2nd place votes (4 points each) plus one 3rd place vote (3 points each) plus no 4th place votes (2 points each) plus two 5th place votes (1 point each) making a total of $(9*5)+(2*4)+(1*3)+(0*2)+(2*1) = 58$ points from $(9+2+1+0+2) = 14$ voters.
